THERMO ASH TREATMENT INSTRUCTIONS

Our Thermo ash is sourced from sustainable managed European forests (FSC® – FSC C153404) and is thermally treated at a temperature of at least 215°C without the addition of chemical substances, using steam to prevent splitting and cracking. This treatment is what gives the ash wood its impressive durability and prevents the settling of fungi and moulds.

The heat treatment of the ash wood makes the natural properties change and turns the color into a rich and warm brown color. The color of the lamellas might vary slightly. This is due to the thermal process.

Thermo ash care

Over time Thermo ash develops an evenly grey patina under the effects of wind and weather. To keep or to regain the warm brown color, just sand the surface and provide it with an oil suitable for wooden outdoor furniture. We recommend, to treat the Thermo ash with oil on a regularly base (3-4 times a year)
